

# Software development engineer(m/w)

## In this role, you will

---

- Develop and design software for Sensor data processing and fusion
- Software Design, Implementation, Testing and Documentation
- Work on customer projects

## Basic qualifications

---

- Masters degree in Computer Science, Engineering, Mathematics or related discipline
- Experience in Computer Vision / Signal processing / Machine Learning
- Hands on development experience in C++, Java and Python
- Experience with embedded real time systems is an advantage
- Self-directed, flexible, goal oriented and strong sense of ownership

## You will enjoy working at IVISO if

---

- you enjoy challenging problems in the area of Sensor Fusion and 3D data processing
- you have a passion for new technologies
- you enjoy working face to face with the customer

## About us

---

IVISO is an engineering company working in the area of sensor data fusion and processing. We support our automotive customers from pre-series to series development and integration on complex multi core systems with our strong expertise in Sensor Fusion. Besides providing development service for the industry, the company is developing a smart sensor system for localisation and navigation in GPS denied environments.

## What we offer

---

- Interesting and challenging projects in an innovative environment
- Possibility to take responsibility
- Opportunity to develop and improve your technical skills within a team of experts

## Application procedure

---

- Assessment of your application files
- Invitation for an onsite interview
- Invitation for a second onsite interview with several team members

## Application files

---

From your application files, we seek to get a first impression of your technical skills and experience. Recommendation letter, work certificate or any other reference will support your application. Should you be a recent graduate we welcome a transcript of your grades.

Send your application to [office@iviso.at](mailto:office@iviso.at)
